Executive Summary

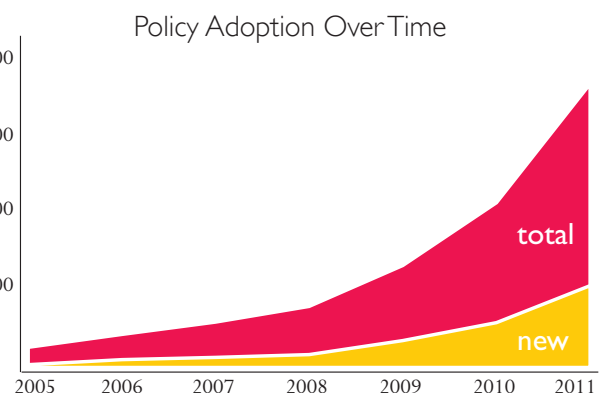

Hundreds of communities of all sizes, in all parts of the country, see their streets as something more than just a way to move people in cars from point A to point B. More than 350 have adopted Complete Streets policies – with 146 of those policies adopted in 2011 alone. These communities have joined a growing national movement for Complete Streets, a movement that encourages and provides for safe access to destinations for everyone, regardless of age, ability, income, ethnicity, or mode of travel.

A Complete Streets approach redefines what a street is intended to do, what goals a transportation agency is going to meet, and how the community will spend its transportation money. It breaks down the traditional separation of ‘highways,’ ‘transit,’ and ‘biking/walking,’ and instead focuses on the desired outcome of a transportation system that supports safe and universally inclusive roadway use.

This report documents the growth of that diverse movement and its strengths by analyzing the more than 350 existing written policies adopted by states, regions, counties, and communities before January 1, 2012. Policies that come closest to meeting the ‘ideal’ are highlighted. Used in conjunction with the *Complete Streets Local Policy Workbook*, this report is also a useful tool for communities looking to develop their own Complete Streets policy based on current best practices. Many examples in this report come from policies adopted in 2011, in part because so many strong examples were adopted last year.

Nation Embraces Complete Streets

Complete Streets policy adoption continues to accelerate rapidly: 146 communities adopted policies in 2011, compared to the 80 new policies we analyzed at the end of 2010. By the start of 2012, more than 350 policies were in place at all levels of government, directing the transformation of community transportation networks into Complete Streets. Over half of state governments or Departments of Transportation (26) had some form of Complete Streets policy, and more than 20 percent of cities with over 100,000 residents

had also committed to this approach. Policy adoption is remarkably widespread: just two states are without a Complete Streets policy at any level of government, while ten states have more than 15 policies on the books.

Policy Adoption Across the Country

Communities Adopting Policies

The movement is not limited to states or large cities; communities of all sizes find these policies valuable. Over one-third of all policies were adopted in suburban communities of fewer than 30,000 residents. Small towns, often in rural areas, are well represented: nearly one in five of all Complete Streets policies were adopted in these jurisdictions.

Insights

Inclusive.

The National Complete Streets Coalition promotes a holistic approach to transportation decision-making – one that recognizes the complex environment of users and modes – as the best way to ensure community streets are safer for all. Through this analysis, it's clear that Complete Streets policies are becoming more and more inclusive. Through 2011, 86 percent of policies address at least people walking, bicycling, and taking transit, and a full 75 percent go beyond those modes to include motorists, commercial traffic, emergency responders, or more. Further, the fact that people are indeed different – some older, some younger, some with disabilities – is reflected in adopted Complete Streets policies. Almost 70 percent include references to people of all ages and 85 percent acknowledge those with disabilities. These numbers have grown over the past few years as well: in 2008, only 38.5 percent of policies acknowledged people of all ages and just two-thirds addressed the needs of people with disabilities.

Diverse.

While a big-city or coastal perception of the Complete Streets movement still persists, our analysis shows that the movement is based in smaller communities in metropolitan areas in the Midwest. As noted above, over one-third of all policies are adopted in suburban communities of fewer than 30,000 people and nearly one-fifth of the policies are from communities in rural areas. At the other extreme, five of the ten largest U.S. cities already have a policy in place, and several more are working toward that goal in 2012. Only two states – South Dakota and Alaska – do not have some form of Complete Streets policy at any governmental level. Ten states have more than 15 policies on the books. Leading the policy adoption charge are the states of Michigan, Minnesota, and New Jersey, with 63, 29, and 28 policies on the books, respectively.

Accountable.

As with any policy initiative, Complete Streets policies can languish on the shelf, forgotten or ignored. However, a growing number of adopted policies – and especially ordinances – contain measures to ensure that written vision is translated into everyday practice. Over half of all adopted Complete Streets policies discuss implementation in some way – up from just over one-third three years ago. Over 60 percent of ordinances and over two-thirds of policies adopted by elected boards directly address next steps. Seventeen communities have taken the advanced step to include measurable performance goals for their projects and community streets. More than 50 require the creation of an implementation advisory board or a report on implementation activities.

Top Policies

The National Complete Streets Coalition has enumerated ten elements that are part of an ‘ideal’ Complete Streets policy. Though the concept of “Complete Streets” is itself simple and inspiring, the Coalition has found, through research and practice, that a policy document must do more than simply affirm support for Complete Streets. The ten elements refine the vision, provide clear direction and intent, and grant the flexibility in design and approach necessary to secure an effective Complete Streets process and outcome.

In this report, we compare each adopted policy to our ten elements. Those policies that achieve top scores for particular elements are highlighted within the text. Policies that received the top overall scores can be found on page 26. The appendix contains the scores for all adopted policies, grouped by type of policy document and level of governance.

The top-scoring policies from all levels, and of all policy types, are noted below. Refer to the additional lists in the report for more high-scoring policies.

New Jersey Department of Transportation	<i>Policy No. 703</i>
Louisiana Department of Transportation and Development	<i>Complete Streets Policy</i>
California Department of Transportation	<i>Deputy Directive 64-R1</i>
State of Minnesota	<i>Sec. 52. Minnesota Statutes 2008, section 174.75</i>
State of Connecticut	<i>Public Act 09-154 (SB 735)</i>
Mid-Ohio Regional Planning Commission	<i>Complete Streets Policy</i>
Bloomington/Monroe County Metropolitan Planning Org.	<i>Complete Streets Policy</i>
Fargo-Moorhead Metropolitan Council	<i>Complete Streets Policy</i>
Hennepin County, Minnesota	<i>Complete Streets Policy</i>
Cook County, Illinois	<i>Ordinance</i>
Wilkin County, Minnesota	<i>Resolution</i>
Baldwin Park, California	<i>Complete Streets Policy</i>
New Hope, Minnesota	<i>Complete Streets Policy</i>
Crystal City, Missouri	<i>Ordinance</i>
Birmingham, Alabama	<i>Resolution</i>
Bellevue, Nebraska	<i>Resolution</i>
Azusa, California	<i>Complete Streets Policy</i>
Roanoke, Virginia	<i>Complete Streets Policy</i>
Big Lake, Minnesota	<i>Resolution No. 2010-74</i>
Blue Island, Illinois	<i>Ordinance</i>

Introduction

Hundreds of communities of all sizes, in all parts of the country, see their streets as something more than just a way to move people in cars from point A to point B. More than 350 have adopted Complete Streets policies – with 146 of those policies adopted in 2011 alone. These communities have joined a growing national movement for Complete Streets, a movement that encourages and provides for the safe access to destinations for everyone, regardless of age, ability, income, ethnicity, or mode of travel.

The power of the Complete Streets movement is that it fundamentally redefines what a street is intended to do, what goals a transportation agency is going to meet, and how the community will spend its transportation money. It breaks down the traditional separation of ‘highways,’ ‘transit,’ and ‘biking/walking,’ and instead focuses on the desired outcome of a transportation system that supports safe use of the roadway for everyone, by whatever means they are traveling.

Complete Streets policies change the traditional transportation paradigm from “moving cars quickly” to “providing safe access for all modes.” Three hundred and fifty-nine policies have been adopted across the country including: 26 states, the Commonwealth of Puerto Rico, and the District of Columbia; 33 regional planning organizations; 31 counties; and 268 municipalities of all sizes.

The National Complete Streets Coalition supports communities as they develop, adopt, and implement Complete Streets policies. As part of this work, we promote a comprehensive policy model that includes ten ideal elements. Though the concept of “Complete Streets” is itself simple and inspiring, the Coalition has found, through research and practice, that a policy must do more than simply affirm support for Complete Streets. The ten elements refine the vision, provide clear direction and intent, are accountable to a community’s needs, and grant the flexibility in design and approach necessary to secure an effective Complete Streets process and outcome.

About This Document

As communities continue to take an interest in Complete Streets policies, we’ve found an increasing need to provide clear, nuanced descriptions of what ‘ideal’ policies look like; to help communities develop language that best fits their needs; and to recognize the communities that have crafted language that will make a real difference in their neighborhoods. To accomplish this,

we've developed two tools: a *Complete Streets Local Policy Workbook* for counties and cities to more fully examine their current practices and Complete Streets needs; and this annual *Policy Analysis* report to document how well best practices are represented in adopted policy language.

Our methodology, described in the pages that follow, is based on the ten elements of an ideal Complete Streets policy developed in consultation with members of the National Complete Streets Coalition Steering Committee and our Workshop Instructor corps, as well as through what we learned in researching the American Planning Association report, *Complete Streets: Best Policy and Implementation Practices*. These elements come from decades of experience in transportation planning and design, reflecting a national model of best practice that can be employed in nearly all types of Complete Streets policy.

This analysis is based on what has been written on paper and is not intended to reflect the degree to which any given community is successful in implementing its Complete Streets goals. Creating change within a transportation agency's procedures and processes, and translating those changes into on-the-ground work, will be investigated through other tools the Coalition is developing.

What Is a Complete Streets Policy?

Complete Streets policies formalize a community's intent to plan, design, operate, and maintain streets so they are safe for all users of all ages and abilities. Policies direct decision-makers to consistently fund, plan for, design, and construct community streets to accommodate all anticipated users, including pedestrians, bicyclists, public transportation users, motorists, and freight vehicles.

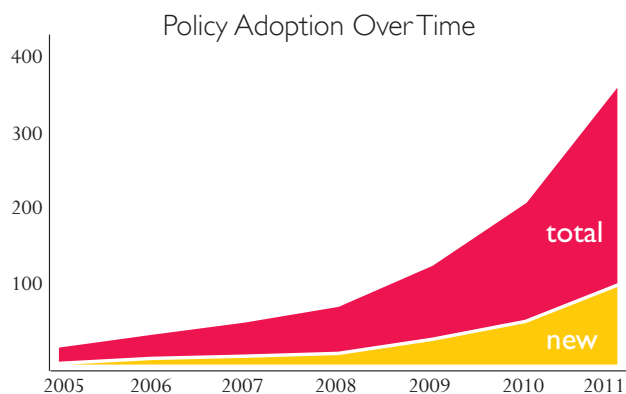

The National Complete Streets Coalition recognizes many different types of policy statements as official commitments to a Complete Streets approach, including: legislation, resolutions, executive orders, departmental policies, policies adopted by an elected board, plans, and design guidance. Refer to the *Complete Streets Local Policy Workbook* for an explanation of these different types of policies, and for guidance on employing them.

While we recognize and count Complete Streets policies included as part of formal planning documents and design guidance, we do not provide a numerical analysis in this document. We have found that our methodology is not as well adapted to the nuances of and detail provided in community transportation master plans, comprehensive plans, general plans, and design guidance.

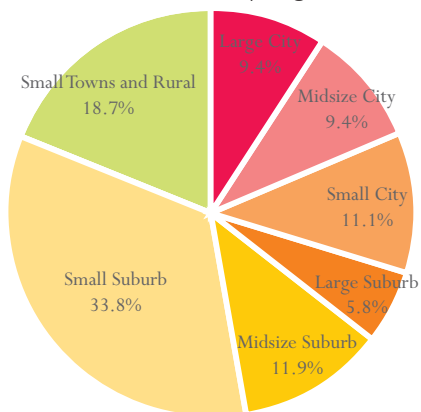

Nation Embraces Complete Streets

Complete Streets policy adoption has been accelerating rapidly, with the number of policies adopted roughly doubling each of the last three years. This report includes analysis of all adopted policies, but draws more heavily on 2011 policies for examples.

Over half the states (26) have some form of Complete Streets policy, from legislation to policies adopted by state Departments of Transportation; they are joined by legislation in Puerto Rico and a departmental policy in Washington, D.C. Regional planning organizations are also joining in, with more than 30 funding and supporting networks of Complete Streets in their areas. More than 30 counties are also directing their transportation staff to consider the needs of all users.

Communities Adopting Policies

Most policies, though, are adopted at the local level; advanced by residents, public health advocates, and transportation professionals; and championed by local elected officials. Cities and towns, large and small, are looking to Complete Streets as a way to manage growing demand for active transportation options and to support economic vitality. Of the 268 municipalities with a Complete Streets policy, over one-third are suburban communities of fewer than 30,000 people. Small towns, often in rural areas, are well represented, with about one-fifth of policies adopted by these smaller jurisdictions.

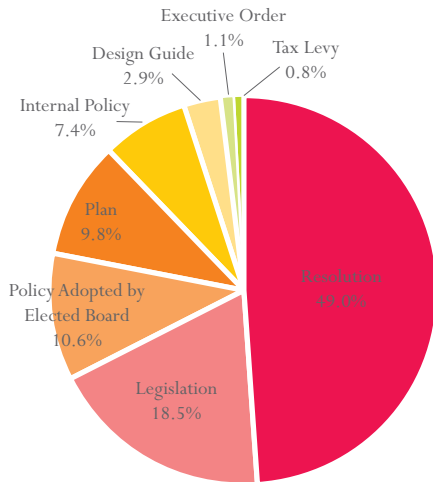

On the other end of the spectrum, twenty percent of cities with at least 100,000 residents have committed to Complete Streets.

Policy adoption is remarkably widespread: just two states do not have a Complete Streets policy at any level of government, while ten states have over 15 policies on the books. Leading the policy adoption charge are the states of Michigan, Minnesota, and New Jersey, with 63, 29, and 28 policies, respectively.

Policy Adoption Across the Country

Types of Adopted Policies

Just over 18 percent of Complete Streets policies are passed as legislation and encoded in statutes, while nearly half are expressed through non-binding resolutions. Internal policies, adopted by top-level departmental leaders, made up about 8.5 percent of all policies, and just under 10 percent are contained inside planning documents such as comprehensive plans. Growing in number are city policies that are approved by the legislative branch; such policies, which are generally more detailed, make up nearly 11 percent of all Complete Streets policies.

The Complete Streets movement has been powered by diverse alliances that have brought together advocates for older Americans, public health agencies, transportation practitioners, bicycle advocates, and many others. Policies have been adopted as part of public health campaigns to create friendly environments for healthy physical activity; as a way to address pressing safety concerns; and as one answer to the need to create more sustainable communities, both environmentally and economically.

Analyzing Policy Language

The National Complete Streets Coalition promotes a comprehensive policy model that includes ten ideal elements. Though the concept of “Complete Streets” is itself simple and inspiring, the Coalition has found, through research and practice, that a policy must do more than simply affirm support for Complete Streets. The ten ideal elements refine the vision, provide clear direction and intent, are accountable to a community’s needs, and grant the flexibility in design and approach necessary to secure an effective Complete Streets process and outcome.

The ten elements can be divided into four categories:

- ‘Pre-policy’ work of establishing a compelling vision;
- Creating a strong core commitment to providing for all users and modes in all projects;
- Rounding out that directive with supporting best practices; and
- Planning next steps for policy implementation.

This report focuses on how written policy language adopted to date compares to the Coalition’s ten elements of an ideal policy. Refer to the *Complete Streets Local Policy Workbook* for a detailed discussion of each of the ten elements and questions for your community to answer in coming up with the most appropriate language for your own policy document.

Each written policy adopted before January 1, 2012 was compared against the ten elements and awarded up to 5 points for how well it fulfilled each of the elements (see table on page 15). This score was weighted to emphasize the policy elements proven through research and Coalition member experience to be of more importance in a written policy. Upon further investigation into how policy elements influence implementation, we plan to revisit how each element is weighted; however, this year we made no changes in weighting from our 2010 report.

Just as community streets vary in form and facilities, we do recognize that there are inherent differences between policy types. What can be accomplished through a legislative act will be different than what might be included in a comprehensive plan, for example. We acknowledge that some elements of an ideal policy are unlikely to appear in some policy types and encourage comparison within policy type, rather than across all types. For this reason, policies are grouped by policy type.

In undergoing this scored analysis, we have found it does not work as well for comprehensive plans, where a finer analysis is needed to accurately determine strength and reach of the Complete Streets element within the overall framework of the large and more complex plan.

The tool is also inappropriate for simple design standards that include little information about

the justification and goals of those designs for the community and for more detailed design manuals. We do not use this tool on either of these policy types; however, we do include these policies in our count and you can find them listed on our website: www.completestreets.org/atlas. Though some design manuals may have a more extensive discussion of policy, their place within the transportation process makes the inclusion of some elements of an ideal Complete Streets policy inappropriate. Thus, it is rare for these policies to have much additional guidance in implementation of the community's Complete Streets vision. It is important to note that design guidance is rarely the first Complete Streets policy adopted in a community and is often the realization of some earlier policy effort and part of the implementation process.

Using the Report

The main report includes listings of the strongest policies overall, as well as those that show particular strength in a single element. These lists were determined using the numerical scores and weights shown on page 15. Within the report you'll find quotes from actual policies and links so you can read more high-scoring policies. We provide reference links for intent; the 'core elements' of a Complete Streets policy; and elements related to implementation. The lists cover all adopted policies, but the examples listed in the text draw more heavily on the most recent 2011 policies. The appendix lists all policies analyzed, grouped by policy type and listed in order of their strength.

Used with the *Complete Streets Local Policy Workbook*, this report can help inspire policy language based on well-written, existing documents in communities like your own. We encourage readers to go beyond the limited number of policies named in the main report and use the appendix to look for good policies in your own region or policies that fit particular criteria.

In communities where a Complete Streets policy is already in place, this report can be used to compare your policy language to the 'ideal', possibly inspiring improvements to the current policy or giving your community a reason to boast. It can also help in thinking through the various pieces of effective implementation. In addition to the steps discussed in the "Implementation Next Steps" section, you may find inspiration in thinking through how to reach the 'ideal' of each element through your everyday transportation decision making. For example, are all users' needs considered in traffic signal operations? How is your community improving network connectivity for all modes?

Measuring Complete Streets Implementation

This report focuses exclusively on the strength of the language used in Complete Streets policies. Adoption of a policy with strong language is only the first step: the policies must lead to changes inside of transportation agencies that then lead to project-level changes as transportation projects are designed for the safe use of bicyclists, transit users, and pedestrians of all ages and abilities. Scores from this policy analysis do not directly translate to a community's success in achieving agency and on-the-ground change.

We know from our research and experience that full implementation requires agencies to offer additional educational opportunities for staff and community leaders, as well as to create new project development processes; review and revise design standards; and adopt new performance measures. Policies that look good on paper are of little value if they do not lead to change in practice and in projects on the ground. We are encouraged that more policies are including specific implementation steps, such as forming a committee, directing updates to specific documents, or instituting reporting requirements and deadlines.

We hope the guidance provided here and in the *Complete Streets Local Policy Workbook* helps those charged with policy-writing set appropriate and achievable goals for implementation activities. Keep an eye out for upcoming implementation resources from the National Complete Streets Coalition, including more specific steps that communities have and can take to ensure their policy vision translates into on-the-ground change.

Points per Policy Element and Weighted Points

<i>Element</i>	<i>Details</i>	<i>Points</i>	<i>Weight</i>
Intent		max: 5	6
	Indirect – indirect statement (“shall implement Complete Streets principles”)	1	
OR	Average – direct statement with equivocating or weaker language (“consider”, “may”)	3	
OR	Direct – direct statement of accommodation (“shall”, “must”, “will”)	5	
Core Commitment			
<i>All Users and Modes</i>		max: 5	20
	Pedestrians and bicyclists (required for consideration)	--	
OR	Pedestrians, bicyclists, and transit	1	
OR	Pedestrians, bicyclists, transit, plus one more mode	2	
OR	Pedestrians, bicyclists, transit, plus two more modes	3	
	Plus a point for including a reference to users of all ages	1	
	Plus a point for including a reference to users of all abilities	1	
<i>Projects and Phases</i>		max: 5	12
	New construction only	0	
OR	New and retrofit/reconstruction projects	3	
	Plus points if policy clearly applies to all projects, or specifically includes repair/3R projects, maintenance, and/or operations	2	
<i>Exceptions</i>		max: 5	16
	No mention	0	
OR	Lists exceptions, but at least one lacks clarity or allows for loose interpretation	1	
OR	Lists exceptions clearly and without much room for loopholes	2	
	Plus points for specifying an approval process	3	
Best Practice Elements			
<i>Network</i>		max: 5	2
	No mention	0	
OR	Acknowledges	5	
<i>Jurisdiction</i>		max: 5	8
	Agency-owned roads (assumed)	0	
OR	States and regions: agency-funded projects but not on agency-owned roads	3	
OR	Counties and cities: privately built roads	3	
	Plus points for recognizing need to work with other agencies, departments, or jurisdictions	2	
<i>Design</i>		max: 5	4
	No mention	0	
	Points for referencing specific design criteria or directing use of the best and latest	3	
	Points for referencing design flexibility in balancing user needs	2	
<i>Context Sensitivity</i>		max: 5	8
	No mention	0	
OR	Acknowledges	5	
<i>Performance Measures</i>		max: 5	4
	No mention	0	
OR	Establishes new measures (does not count toward implementation points)	5	
Implementation Next Steps		max: 5	20
	No implementation plans specified	0	
OR	Addresses implementation in general	1	
OR	Addresses at least two of our implementation steps	3	
	Plus a point for assigning oversight to a committee or person OR establishing a reporting requirement	1	
	Plus a point for directing changes to project selection criteria	1	

Vision

States and communities are adopting Complete Streets policies for many reasons. For example, in Baldwin Park, California, the community recognized that streets without safe and comfortable places for walking and bicycling were an impediment to their goal of improving public health. A strong vision can inspire a community to follow through on its complete streets policy. Just as no two policies are alike, visions are not one-size-fits-all either. Because each community has its own valid vision that cannot be empirically compared across policies, for this criterion we looked to the core of the Complete Streets commitment – one that brings all users into the everyday planning, design, construction, and operation of transportation systems.

“The Town of Babylon recognizes the absolute necessity of promoting pedestrian, bicycle and public transportation travel as an alternative to the automobile in order to protect all road users, reduce negative environmental impacts, promote healthy living, and advance the well-being of commuters.”

– Babylon, New York

Intent

Clarity of intent and writing makes it easy for those tasked with implementation to understand the new goals and determine what changes need to be made fulfill the policy’s intent.

The strongest policies are those that are clear in intent, saying facilities that meet the needs of

“The City of Bozeman will plan for, design, construct, operate, and maintain appropriate facilities for pedestrians, bicyclists, transit vehicles and riders, children, the elderly, and people with disabilities in all new construction and retrofit or reconstruction projects subject to the exceptions contained herein.”

– Bozeman, Montana

people traveling on foot or bicycle “shall” or “must” be included in transportation projects. The ‘strong’ label is also applied to policies in which the absolute intent of the policy is obvious and direct, even if they don’t use the words “shall” or “must”. These policies receive the full five points.

Policies are noted as ‘average’ when they are clear in their intent -- defining what exactly a community expects from the policy -- but use equivocating language that weakens the directive. For example, the policy says that the needs of pedestrians and bicyclists “will be considered” or “may be included” as part of the process. ‘Average’ policies receive a total of three points.

Some policies are ‘indirect’. They refer to implementation of certain principles, features, or elements defined elsewhere; refer to general ‘Complete Streets’ application with no clear directive;

or instruct the development of a more thorough policy document. Examples of indirect language include phrases such as “consider the installation of ‘Complete Streets’ transportation elements” and “supports the adoption and implementation of ‘Complete Streets’ policies and practices to create a transportation network that accommodates all users.” Using this language can perpetuate the separation of modes and the perception that a road for cars is fundamentally different from the road for other users, that only some roads should be “complete streets,” and even that these roads require special, separately funded “amenities”. For these reasons, policies with an indirect approach receive a total of one point for this category.

Policy Examples: Strong Complete Streets Intent

<i>Jurisdiction</i>	<i>Policy</i>	<i>Type</i>	<i>Year</i>	<i>Link</i>
Des Plaines, IL	Complete Streets Policy	Policy Adopted by Elected Board	2011	http://www.completestreets.org/webdocs/policy/cs-il-desplaines-policy.pdf

Big Lake, MN	Resolution No. 2010-74	Policy Adopted by Elected Board	2010	http://www.completestreets.org/webdocs/policy/cs-mn-biglake-policy.pdf
Bozeman, MT	Resolution No. 4244	Resolution	2010	http://www.completestreets.org/webdocs/policy/cs-mt-bozeman-resolution.pdf
Dayton, OH	Livable Streets Policy	Policy Adopted by Elected Board	2010	http://www.completestreets.org/webdocs/policy/cs-oh-dayton-policy.pdf

Core Commitment

All Users and Modes

A Complete Streets policy must begin with an understanding that people who travel by foot or on bicycle are legitimate users of the transportation system and equally deserving of safe facilities to accommodate their travel. No policy is a Complete Streets policy without a clear statement affirming this fact, and it is therefore a requirement to include both modes – walking and bicycling – in the policy before it can be further analyzed.

Beyond those two modes, our methodology requires policies to include public transportation to receive any additional points. Including one more mode, such as cars, freight traffic, emergency response vehicles, or equestrians, earns a total of two points. Including two additional user groups earns the policy three points.

“...all users, including, but not limited to motorists, cyclists, pedestrians, transit and school bus riders, delivery and service personnel, freight haulers, and emergency responders. “All users” includes people of all ages and abilities.”

*– Mid-Ohio Regional Planning Commission
(Columbus, Ohio region)*

Beyond the type of user is a more nuanced understanding that not all people who move by a certain mode are the same. For a reference to the needs of people young and old, a policy receives one additional point. For including people with disabilities, another point is awarded.

Policy Examples: All Users and Modes

<i>Jurisdiction</i>	<i>Policy</i>	<i>Type</i>	<i>Year</i>	<i>Link</i>
Azusa, CA	Complete Streets Policy	Policy Adopted by Elected Board	2011	http://www.completestreets.org/webdocs/policy/cs-ca-azusa-policy.pdf

Hennepin County, MN	Complete Streets Policy	Policy Adopted by Elected Board	2009	http://www.completestreets.org/webdocs/policy/cs-mn-hennepincounty-policy.pdf
Crystal City, MO	Ordinance	Legislation	2010	http://www.completestreets.org/webdocs/policy/cs-mo-crystalcity-ordinance.pdf
Mid-Ohio Regional Planning Commission (Columbus, OH area)	Complete Streets Policy	Internal Policy	2010	http://www.completestreets.org/webdocs/policy/cs-oh-morpc-policy.pdf

Projects and Phases

The ideal result of a Complete Streets policy is that all transportation improvements are viewed as opportunities to create safer, more accessible streets for all users. Policies that apply only to new construction and reconstruction projects receive two points; policies that also clearly include maintenance, operations, or other projects receive all five points. Policies that do not apply to projects beyond newly constructed roads, or ones that are not clear regarding their application, receive no points.

“The City of Birmingham shall, to the maximum extent practical, scope, plan, design, construct, operate, and maintain all City streets to provide a comprehensive and integrated network of facilities for people of all ages and abilities traveling by foot, bicycling, automobile, public transportation, and commercial vehicle.”

– Birmingham, Alabama

Babylon, NY	Complete Streets Policy	Policy Adopted by Elected Board	2010	http://www.completestreets.org/webdocs/policy/cs-ny-babylon-policy.pdf

Exceptions

Making a policy work in the real world requires developing a process to handle exceptions to providing for all modes in each project. The Coalition believes the following exceptions are appropriate with limited potential to weaken the policy. They follow the Federal Highway Administration’s guidance on accommodating bicycle and pedestrian travel and identified best practices frequently used in existing Complete Streets policies. Accommodations may not be necessary on corridors where:

1. Specific users are prohibited, such as interstate freeways or pedestrian malls.
2. Cost of accommodation is excessively disproportionate to the need or probable use. We do not recommend attaching a percentage to define “excessive” as the context for many projects will require different portions of the overall project budget to be spent on the modes and users expected; additionally, in many instances the costs may be difficult to quantify. A 20% cap may be appropriate in unusual circumstances, such as where natural features (e.g. steep hillsides, shorelines) make it very costly or impossible to accommodate

all modes. A 20 percent figure should always be used in an advisory rather than absolute sense. The Coalition does not believe a lower cap is appropriate.

3. A documented absence of current and future need.

Many communities have included other exceptions that the Coalition, in consultation with transportation planning and engineering experts, also feels are unlikely to create loopholes:

1. Transit accommodations are not required where there is no existing or planned transit service.
2. Routine maintenance of the transportation network that does not change the roadway geometry or operations, such as mowing, sweeping, and spot repair.
3. Where a reasonable and equivalent project along the same corridor is already programmed to provide facilities exempted from the project at hand.

“Any exception to applying this Complete Streets Policy to a specific roadway project must be approved by the City Council, with documentation of the reason for the exception.

...Exceptions may be made when:

- *The project involves a roadway on which non-motorized use is prohibited by law. In this case, an effort shall be made to accommodate pedestrians and bicyclists elsewhere.*
- *There is documentation that there is an absence of use by all except motorized users now and would be in the future even if the street were a complete street.”*

– Missoula, MT

Including one or more of the above exceptions garners two points. Additional exceptions begin to weaken the policy and may create loopholes too large to achieve the Complete Streets vision. If they are included, the policy receives one point. If a policy lists no exemptions, no points are awarded.

In addition to defining exceptions through good policy language, there must be a clear process for granting them. Policies that note

how exceptions are to be granted earn an additional three points.

Policy Examples: Exceptions

<i>Jurisdiction</i>	<i>Policy</i>	<i>Type</i>	<i>Year</i>	<i>Link</i>

Best Practice Elements

Network

An ideal Complete Streets policy recognizes the need for a connected, integrated network that provides transportation options to a resident's many potential destinations. Acknowledging the importance of a network approach earns the full five points. Additional discussion of connectivity is encouraged.

"This policy will create a comprehensive, integrated, connected transportation network for Louisiana that balances access, mobility, health and safety needs of motorists, transit users, bicyclists, and pedestrians of all ages and abilities, which includes users of wheelchairs and mobility aides. It ensures a fully integrated system, by planning, funding, designing, constructing, managing, and maintaining a complete and multi-modal network..."

– Louisiana Department of Transportation and Development

Jurisdiction

Creating complete streets networks is difficult because many different agencies have a stake in the planning, design, and construction of streets. They are built and maintained by state, county, and local agencies, and private developers often build new roads. When a state or Metropolitan Planning Organization's policy clearly notes that projects receiving money passing through the agency is expected to follow a Complete Streets approach, the policy is given three points. At the local level, policies that must be applied to private development receive three points.

At all levels, policies that articulate the need to work with others in achieving the Complete Streets vision receive two extra points.

"It is a goal of the Unified Government to foster partnerships with the State of Kansas, the Federal Highway Administration, the Mid-America Regional Council, surrounding counties and cities, school districts, citizens, businesses, interest groups and neighborhoods to implement the Complete Streets policy."

– Wynadotte County/Kansas City, Kansas

Design

Communities adopting a Complete Streets policy should use the best and latest design standards available to them. Policies that clearly name current design guidance or reference using the best available receive three points toward the maximum of five. Policies that address the need for a balanced or flexible design approach receive two points toward the maximum of five. Additional discussion of design flexibility within the policy is encouraged.

“The director of DPW shall adapt, develop and adopt departmental policies, design criteria, standards, and guidelines based upon recognized best practices in street design, construction and operations including but not limited to the latest editions of American Association of State Highway Transportation Officials (AASHTO) A Policy on Geometric Design of Highways and Streets; AASHTO Guide for Planning, Designing, and Operating Pedestrian Facilities; AASHTO Guide for the Development of Bicycle Facilities; Institute of Transportation Engineers (ITE) Designing Walkable Urban Thoroughfares: A Context Sensitive Approach; National Association of City Transportation Officials (NACTO) Urban Bikeway Design Guide; U.S. Access Board Public Right-of-Way Accessibility Guidelines; Highway Capacity Manual and Highway Safety Manual. In doing so, DPW shall consider methods of providing development flexibility within safe design parameters, such as context-sensitive design solutions. DPW shall also attempt to employ all solutions consistent with and sensitive to the context of the project.”

– New Orleans, Louisiana

Context Sensitivity

An effective complete streets policy must be sensitive to the community context. Given the range of policy types and their varying ability to address this issue, a policy that mentions the need to be context-sensitive nets the full five points. Additional discussion of adapting roads to fit the character of the surrounding neighborhood and development is encouraged.

“The implementation of this Policy shall reflect the context and character of the surrounding built and natural environments, and enhance the appearance of such.”

– Dayton, Ohio

Performance Measures

Communities with complete streets policies can measure success several ways, from miles of bike lanes; to percentage of the goal sidewalk network achieved; to the number of people who choose to ride public transportation. Including any measures in a Complete Streets policy nets the full five points. Direction to create measures is counted in the below section, Implementation Next Steps.

Best Practice Elements

“Like any project involving the use of taxpayer dollars, Complete Streets should be continuously evaluated for success and opportunities for improvement. This policy encourages the regular gauging and reporting of implementing Complete Streets through the following performance measures:

- User data – bike, pedestrian, transit and traffic
- Crash data
- Use of new projects by mode
- Compliments and complaints
- Linear feet of pedestrian accommodations built
- Number of ADA accommodations built
- Miles of bike lanes/trails built or striped
- Number of transit accessibility accommodations built
- Number of street trees planted
- Number of exemptions from this policy approved”

– New Hope, Minnesota

Policy Examples: Performance Measures

<i>Jurisdiction</i>	<i>Policy</i>	<i>Type</i>	<i>Year</i>	<i>Link</i>
Winter Park, FL	Resolution No. 2083-11	Resolution	2011	http://www.completestreets.org/webdocs/policy/cs-fl-winterpark-resolution.pdf
Baltimore, MD	Council Bill 09-0433	Resolution	2010	http://www.completestreets.org/webdocs/policy/cs-md-baltimore-resolution.pdf
New Hope, MN	Complete Streets Policy	Policy Adopted by Elected Board	2011	http://www.completestreets.org/webdocs/policy/cs-mn-newhope-policy.pdf
Roanoke, VA	Resolution No. 38042-031708	Policy Adopted by Elected Board	2008	http://www.completestreets.org/webdocs/policy/cs-va-roanoke-policy.pdf
La Crosse, WI	Ordinance No. 4627	Legislation	2011	http://www.completestreets.org/webdocs/policy/cs-wi-lacrosse-ordinance.pdf

Implementation Next Steps

A formal commitment to the Complete Streets approach is only the beginning. The Coalition has identified four key steps to take for successful implementation of a policy:

1. Restructure or revise related procedures, plans, regulations, and other processes to accommodate all users on every project.
2. Develop new design policies and guides or revise existing to reflect the current state of best practices in transportation design. Communities may also elect to adopt national or state-level recognized design guidance.
3. Offer workshops and other training opportunities to transportation staff, community leaders, and the general public so that everyone understands the importance of the Complete Streets vision.
4. Develop and institute better ways to measure performance and collect data on how well the streets are serving all users.

Any recognition or discussion of the next steps to achieve Complete Streets is awarded one point. Specifying the need to take action on at least two of the four steps identified above nets three points.

Assigning oversight of or regularly reporting on implementation is critical to ensuring the policy becomes practice. Policies that identify a specific person or advisory board to oversee and help drive implementation, or policies that establish a reporting requirement receive an additional point.

Policies that change the way transportation projects are prioritized, and thus chosen for funding and construction, are awarded an additional point.

Implementation Next Steps

- (A) *Advisory Group.* The City will establish an inter-departmental advisory committee to oversee the implementation of this policy. The committee will include members of Public Works, Community Development, Recreation and Community Services, and the Police Departments from the City of Baldwin Park. The committee may include representatives from the Los Angeles County Metropolitan Transportation Authority, representatives from the bicycling, disabled, youth and elderly communities and other advocacy organizations, as relevant. This committee will meet quarterly and provide a written report to the City Council evaluating the City’s progress and advise on implementation.
- (B) *Inventory.* The City will maintain a comprehensive inventory of the pedestrian and bicycling facility infrastructure integrated with the City’s database and will prioritize projects to eliminate gaps in the sidewalk and bikeways networks.
- (C) *Capital Improvement Project Prioritization.* The City will reevaluate Capital Improvement Projects prioritization to encourage implementation of bicycle, pedestrian, and transit improvements.
- (D) *Revisions to Existing Plans and Policies.* The City of Baldwin Park will incorporate Complete Streets principles into: the City’s Circulation Element, Transportation Strategic Plan, Transit Plan, Traffic Safety Master Plan, Specific Plans, Urban Design Element; and other plans, manuals, rules, regulations and programs.
- (E) *Other Plans.* The City will prepare, implement, and maintain a Bicycle Transportation Plan, a Pedestrian Transportation Plan, a Safe Routes to School Plan, an Americans with Disabilities Act Transition Plan, and a Street Tree and Landscape Master Plan.
- (F) *Storm Water Management.* The City will prepare and implement a plan to transition to sustainable storm water management techniques along our streets.
- (G) *Staff Training.* The City will train pertinent City staff on the content of the Complete Streets principles and best practices for implementing the policy.
- (H) *Coordination.* The City will utilize inter-department project coordination to promote the most responsible and efficient use of fiscal resources for activities that occur within the public right of way.
- (I) *Street Manual.* The City will create and adopt a Complete Streets Design Manual to support implementation of this policy.
- (J) *Funding.* The City will actively seek sources of appropriate funding to implement Complete Streets.”

– Baldwin Park, California

Methodology

The National Complete Streets Coalition designed this analysis to be easily understood by a wide audience, both in the resulting scores and in the scoring system itself.

Each element of an ideal Complete Streets policy, as already established by the Coalition, was given a possible total of 5 points, where 5 represents fulfillment of that ideal element. Refer to the previous section for a discussion of how points are awarded. Awarding each element a total of 5 points made it simple to establish benchmarks in each category without drawing unnecessary comparisons between elements.

The Coalition believes that some elements of a policy are more important to establish than others. To reflect this, the tool uses a weighting system so that the points earned per element are then put in context of the overall policy.

The chosen weights began with a staff exercise and discussion around the elements, based on research, case studies conducted for the American Planning Association report, *Complete Streets: Best Policy and Implementation Practices*, experience in policy development, and work with communities across the country. These weights were then adjusted based on feedback from the Coalition's Steering Committee and input from attendees of the Coalition's 2011 Strategy Meeting. We simplified the weights so that they would a) add to a total possible score of 100 and b) would not require any complex mathematical tricks or rounding. We anticipate making changes to this weighting based on continued research into how policy language correlates to implementation.

The identified weight for each element is multiplied by points awarded, then divided by 5 (the highest possible number of points). For example, a policy that addresses bicycling, walking, and public transportation for people of all ages and abilities receives a total of 3 points. Those points are multiplied by 20, the weighting assigned to that policy element, and divided by 5, the highest possible number of points. For this policy element, the policy receives a score of 12 out of a possible 20.

When the scores for every element are summed, the policy will have a score between 0 and 100, with a higher number indicating it is closer to ideal.
